01 Product description and specification

Product description	Bedpan and bottle rack for organised storage of reusable utensils in hospital sluice rooms and healthcare wash-up areas. Constructed entirely from Grade 304 stainless steel, this robust unit delivers exceptional durability whilst maintaining the highest standards of cleanliness essential for medical facilities. This versatile storage system accommodates both bed pans and urine bottles in a space-efficient vertical configuration, measuring 272 mm (W) x 720 mm (H) with varying lengths to suit different capacity requirements. Available in four standard sizes – from the compact 2-pan/3-bottle unit at 305 mm length to the comprehensive 8-pan/9-bottle configuration at 1220 mm length – the rack provides flexible storage options for facilities of all sizes. The thoughtfully designed bottle section features protective rubber grommets at each opening, preventing scratching and damage to glass or plastic bottles whilst ensuring quiet operation during placement and retrieval. Installation flexibility is achieved through pre-punched 10 mm diameter mounting holes that facilitate secure wall attachment using standard fixings. The unit incorporates a removable stainless steel drip tray at the base, capturing any residual moisture and maintaining hygiene standards whilst simplifying cleaning procedures. This intelligent design feature can be easily removed for thorough sanitisation or replacement. The rack’s commercial-grade construction ensures long-term performance in high-use environments, making it an essential component for efficient medical waste management and patient care operations.
