01 Product description and specification

Product description

1200 mm combination slop hopper and wash basin with a high-level cistern and splashback for institutional sluice rooms.

The B22336 (LT-112-1200-HLC) Combination Slop Hopper and Wash Basin is a compact yet highly functional stainless steel fixture designed for medical and institutional settings where hygienic waste disposal and handwashing are essential.

This 1200 mm-wide unit integrates a slop hopper (left side) and a wash hand basin (right side) into a single durable structure. The slop hopper features a continuous flushing rim and a conical bowl for the effective disposal of liquid and solid waste. A raised anti-drip rim prevents water from spilling onto adjacent surfaces. The hopper is equipped with a 110 mm outlet for connection to sewerage systems, while the wash hand basin has a 40 mm outlet for drainage.

Constructed with pressed and welded stainless steel, this unit is designed for maximum strength and longevity, making it well-suited for hospitals, clinics, laboratories, and other demanding environments. All welds are smoothly ground and polished to a satin finish, ensuring easy cleaning and a professional aesthetic.

This 1200 mm version does not include a drainer section, making it a more space-efficient solution for smaller rooms or areas with limited installation space. A high-level cistern with a pull rod flush mechanism is included, allowing direct flushing into the slop hopper. The unit also comes with a 150 mm high splashback at the rear to maintain cleanliness and prevent water splashes on nearby surfaces.
