01 Product description and specification

Product description

Free-standing Plaster of Paris preparation sink for mixing and wash-up tasks in clinical plaster preparation areas.

Manufactured from Grade 304 stainless steel, the unit is easy to clean and low on maintenance. All visible surfaces are finished to an aesthetically pleasing satin polish finish. The plaster of paris preparation sink is a one-piece, fully welded construction eliminating joints or crevices. This reduces the potential of the build-up of contaminants in hard to reach places ensuring the unit is easy to maintain in a sanitary condition. The top slab features a sloped drip ledge recess which assists in keeping the preparation area clean and dry. The integral splashback to the rear further assists in maintaining a clean preparation area.

The unit includes a preparation bowl for the ergonomic preparation of plaster of paris. The bowl features a 40 mm waste outlet which discharges into the waste cylinder. The waste cylinder features a removable plaster stainer / sump which collects plaster of paris discharged from the preparation sink. This allows for the collection of plaster of paris and minimises the potential of costly blocked drains. The waste cylinder has a 40 mm waste outlet at the bottom and is supplied with a stainless steel lid. The B22351 Free Standing Plaster Of Paris Preparation Sink includes a drainage board which can be situated either on the left-hand or right-hand of the unit. The plaster of paris sink includes four stainless steel legs with adjustable foot pieces. The adjustable foot pieces allow easy levelling on the floor during installation. The unit is easy to install with it being simply positioned within the preparation area and plumbed-in. The preparation sink is suitable for use with wall mounted tapware that is plumbed into the wall above the unit. Where deck mounted tapware is required, tapholes can be provided pre-drilled into the tap landing.

Construction and features

- Free standing plaster of paris preparation sink.
- All surfaces feature an aesthetic satin polish finish.
- The preparation sink is designed to offer hospitals and clinics with an extremely hygienic and durable unit.
- The top slab features a turn down all around to increase strength and durability.
- The top slab also features a sloped drip ledge to assist in keeping the preparation area clean.
- A vermin proof bitumastic coating on the underside of the top slab provides sound deadening.
- A fully welded design results in no joints or crevices thereby reducing the potential of the build-up of contaminants.
- The unit features an integral splashback to the rear with an extended splashback available upon request.
- The plaster of paris unit features a bowl for the easy preparation of plaster of paris.
- The preparation bowl has a 40 mm waste outlet that discharges into an adjacent waste cylinder.
- The waste cylinder collects the plaster of paris thereby prevents the blocking of drains.
- A removable stainless steel lid for closing the waste cylinder is supplied.
- A plastic strainer /sump is supplied for the easy removal of plaster of paris from the waste cylinder.
- The bottom of the waste cylinder is fitted with a 40 mm waste outlet.
- The plaster of paris sink also features a draining board which can be either left-hand or right-hand of the preparation sink.
- The sink is supplied with four stainless steel legs with adjustable foot pieces.
- The unit is suitable for use with wall mounted tapware installed into the wall above the unit.
