01 Product description and specification

Product description

South African manufactured wall-mounted automatic boot scrubber for sole and side cleaning. Motorised brushware, solenoid-controlled water and venturi chemical dosing provide a compact wet boot-washing station with Grade 304 stainless steel construction. Choose B65210(R-220) for 220 V single-phase or B65210(R-380) for 380 V three-phase.

Short Form Specification

SPECIFICATION USE
Use this description when specifying this product range.

Basterfield B65210(R) single-station wall-mounted motorised boot scrubber, Grade 304 stainless steel. Approximate overall dimensions 600 × 300 × 1100 mm. Choose B65210(R-220) for 220 V single-phase or B65210(R-380) for 380 V three-phase. Specify the required supply when requesting a quotation. Each unit is supplied for the chosen electrical supply.

02 Configuration options

Electrical supply	220 V single-phase; 380 V three-phase

Options vary by model; not every combination is available. Use the product page to select a model.

03 Functional features

01 Motorised Sole and Side Brushing

Powered brushware cleans boot soles and lower sides at a single station, providing a dedicated footwear-cleaning point at changing-room and production entrances.

02 Wall-Mounted Compact Layout

Wall mounting keeps the floor beneath the unit accessible for cleaning. Approximate overall dimensions of 600 mm long x 300 mm wide x 1100 mm high suit locations where space is limited.

03 Grade 304 Stainless Steel

Grade 304 stainless steel construction provides durable metal surfaces for the boot scrubber's wet cleaning application.

04 Controlled Water and Chemical Dosing

Solenoid-controlled water flow and automatic chemical dosing deliver water and cleaning solution during brushing, combining scrubbing and solution application at one station.

05 Two Electrical Supply Options

Choose B65210(R-220) for 220 V single-phase or B65210(R-380) for 380 V three-phase to match the available site supply. Each unit is supplied for the selected electrical configuration.

06 Threaded Stainless Steel Waste Outlet

A threaded stainless steel waste outlet provides a connection point for site drainage, helping integrate the wash enclosure into the installation.

04 Application information

Intended applications	Footwear Cleaning and Disinfection
Industries	Food & Beverage Processing, Meat & Poultry Processing

05 Supply and support

Typical lead time	10–15 working days
Warranty	12 months

06 Frequently asked questions

Is this an automatic or manual boot scrubber?

B65210(R) uses motorised brushware, solenoid-controlled water flow and automatic chemical dosing. The user positions each boot for cleaning at the single station. Confirm the required activation and control arrangement when ordering.

What does the wall-mounted boot washer clean?

The standard brushware cleans the soles and lower sides of boots. The unit provides a wet footwear-cleaning point at changing-room and production entrances, with one person using the station at a time.

What space and services are required?

The unit measures approximately 600 mm long x 300 mm wide x 1100 mm high. Allow suitable wall support, user access and cleaning clearance, together with the selected electrical supply, a water supply and a drainage connection for the threaded waste outlet. Confirm the mounting and service requirements for the selected configuration before ordering.

Where is B65210(R) manufactured?

Basterfield manufactures this motorised boot scrubber in South Africa. Include your site location and installation requirements when requesting a quotation.

Which electrical supply options are available?

Choose B65210(R-220) for 220 V single-phase or B65210(R-380) for 380 V three-phase. Select the model that matches your available site supply. Each unit is supplied for the chosen electrical configuration.

How does chemical dosing work, and does scrubbing disinfect boots?

The unit automatically applies cleaning solution during brushing. Boot scrubbing removes dirt and residues; it does not by itself establish a validated disinfection process. Where disinfection is required, the site must specify an approved chemical, concentration and contact-time procedure. Confirm the required chemical and dosing arrangement in the quotation.

Is this a walk-through boot washer?

No. B65210(R) is a single-station boot scrubber where the user positions each boot for cleaning. For a walk-through route, compare B65250 for sole and side brushing or B65450 for sole, side and upper-boot brushing, and confirm the layout against your peak user demand.

How do I request a quotation for the correct model?

Select the required electrical supply and quantity, then add the configuration to your quote request. Include your site location, footwear type, peak user numbers, mounting space, available water and drainage services, chemical requirements and delivery details so the quotation can confirm the supply scope.
