05 Frequently asked questions

What does the low-water-level system do?

At the preset low water level, the system cuts electrical supply to the heating element and illuminates a warning light to indicate that the urn needs refilling.

How can I check the water level?

Use the sight glass to check the water level. The low-level warning light indicates that the urn needs refilling when the preset low level is reached.

Which capacities can I select?

The published capacity choices are 8, 10, 12, 15, 20, 25, 30, 40, 50 and 75 L. Choose the required capacity in the configurator and quote the exact selected item code.

What electrical information should I confirm when ordering?

Confirm the electrical rating and installation supply requirements for the exact selected item. The E24111(TL3030) 30 L model has a 3 kW power rating; confirm the rating separately when selecting another model.
